

Wednesday's Challenge

Make you own rain cloud

Step 1 - Gather your materials

Step 2 - Follow the instructions!

Step 1: fill the glass jar or plastic cup with water until around $\frac{3}{4}$ full.

Step 2: fill the rest of the jar with shaving foam so it looks like clouds floating on water.

Step 3: using the food colouring and pipette, drop some colouring on top of the cloud and watch what happens.

Can you predict what might happen and why?
Looking at the water cycle should help you to figure out what is happening to the clouds.

Send us a picture of your project
